ABBREVIATIONS	xxi
CHAPTER I INTRODUCTION	
1.1 Statement of problem	1
1.2 Literature reviews	5
1.2.1 Antibody	5
1.2.1.1 Polyclonal antibody	5
1.2.1.2 Monoclonal antibody	6
1.2.2 Hybridoma technology	7
1.2.2.1 <i>In vivo</i> immunization	16
1.2.2.2 Developing the screening procedure	17
1.2.2.3 Producing hybridomas	18
1.2.2.3.1 Single cell cloning	18
1.2.3 Feeder cells	21

1.2.4	Conditioned medium	22
1.2.5	Technologies for enhancing the production of monoclonal antibody	24
1.2.6	<i>In vitro</i> immunization	27
1.3	Objectives	29
CHAPTER II MATERIALS AND METHODS		
2.1	Chemicals, antibodies, cell lines and instruments used in this study are shown in Appendix.	30
2.2	Antigen Preparation	30
2.2.1	Hemoglobin Bart's (Hb Bart's)	30
2.2.1.1	Preparation of hemolysates	30
2.2.1.2	Purification of Hb Bart's	30
2.2.2	Hemoglobin E (Hb E) and Hemoglobin F (Hb F)	31
2.1.1	Recombinant Ag85B-BCCP protein	31
2.3	The development of conditioned medium for hybridoma production	32
2.3.1	Preparation of PMA-induced BW and BW conditioned media	32
2.3.2	Study the utilization of conditioned media for hybridoma single cell cloning	32
2.3.2.1	Single cell cloning	32
2.3.3	Study the utilization of conditioned media for generation of hybridomas by hybridoma technique	33

2.3.3.1	Mouse immunization	33
2.3.3.2	Hybridoma technique	35
2.3.4	Determination of antibody response in the immunized mice and culture supernatant by ELISA	35
2.3.4.1	ELISA for anti-Ag85B-BCCP	35
2.3.4.2	ELISA for anti-Hb E antibody	36
2.3.5	Determination of antibody response in the immunized mice and culture supernatant by immunofluorescence staining	37
2.3.5.1	Lysed whole blood immunofluorescence staining	37
2.3.6	Analysis of proteins in the produced conditioned medium by sodium dodesyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE)	37
2.4	The develop high efficiency hybridoma technology for production of monoclonal antibody	38
2.4.1	Pre-isolation of B cell strategy	38
2.4.2	Pre-isolation of antigen specific B cell strategy	39
2.4.2.1	Isolation of Ag85B-BCCP specific B cell for hybridomas production	39
2.5	Development of hybridoma techniques for production of monoclonal antibody having a desired isotype	40
2.5.1	Isolation of IgM and IgG expressing cells for hybridomas production	40

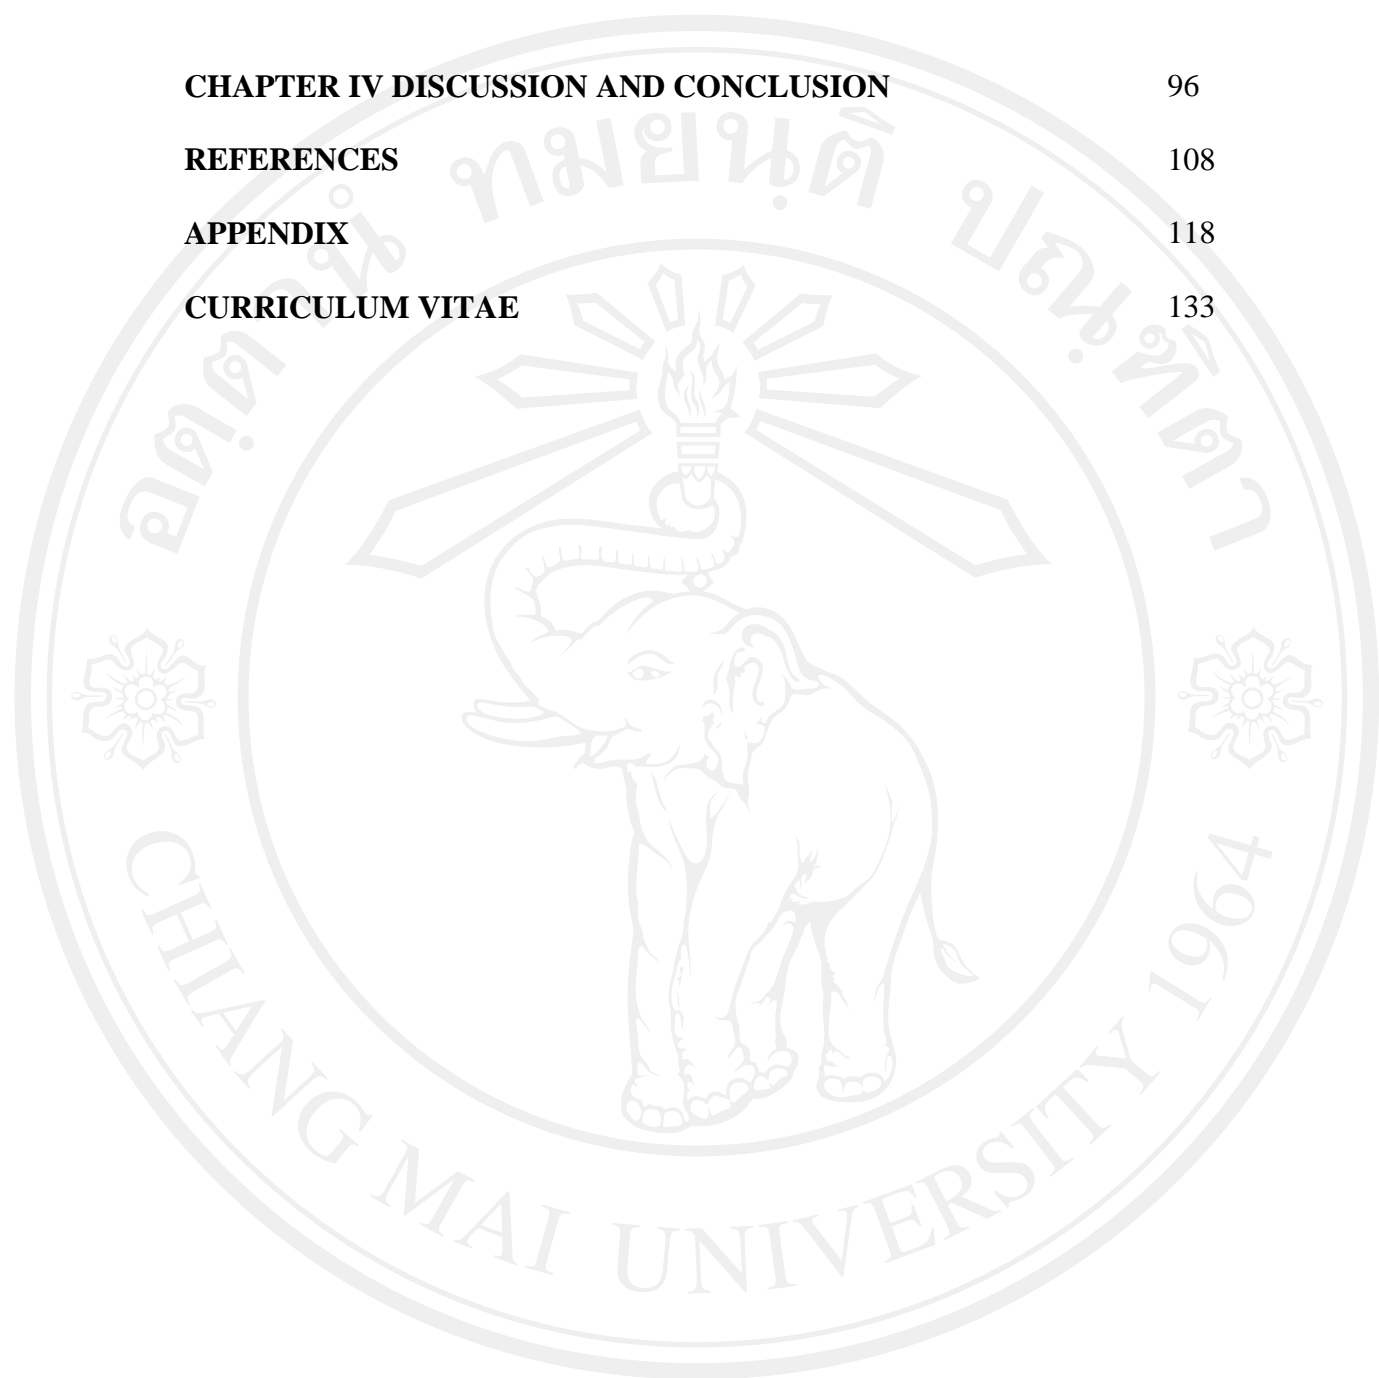

2.5.2	Determination of antibody isotyping by ELISA	41
2.6	<i>In vitro</i> immunization for antibody production	42
2.6.1	To optimize of conditions for <i>in vitro</i> immunization	42
2.6.2	Production of monoclonal antibody by <i>in vitro</i> immunization	43
2.6.3	Determination of anti-Ag85B-BCCP antibody expressing cells by immunofluorescence staining	43

CHAPTER III RESULTS

Part 1: Development of conditioned medium for hybridoma production		45
3.1	Generation of non-mitogen containing conditioned medium	45
3.1.1	Production and utilization of non-mitogen containing conditioned medium on hybridoma single cell cloning	45
3.1.2	Employment of the BW conditioned medium in the hybridoma technique for production of monoclonal antibodies	49
3.2	Generation of mitogen (PMA) induced conditioned medium	55
3.2.1	Production and utilization of PMA-induced conditioned medium for hybridoma single cell cloning	55
3.2.2	Employment of PMA-induced conditioned medium in the hybridoma technique for production of monoclonal	56

	antibodies	
3.2.2.1	Mice immunization and antibody responses	56
3.2.2.2	Hybridoma production	60
3.2.2.3	Analysis of proteins in the BW conditioned medium, PMA-induced conditioned medium by sodium dodesyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE)	63
	Part 2: The development of high efficiency hybridoma technology for production of monoclonal antibody	65
3.3	Pre-B cell isolation strategy	65
3.3.1	Mice immunization and antibody responses	65
3.3.2	Hybridoma production	67
3.4	Pre-isolation of antigen specific B cell strategy	71
3.4.1	Mice immunization and antibody responses	71
3.4.2	Hybridoma production	73
	Part 3: Development of hybridoma techniques for production of monoclonal antibody having a desired isotype	77
3.5	Generation of monoclonal antibodies which have a specific isotype	77
	Part 4: <i>In vitro</i> immunization for monoclonal antibody production	85
3.6	Optimization of the conditions for <i>in vitro</i> immunization	85
3.7	Production of monoclonal antibody by <i>in vitro</i> immunization	87

CHAPTER IV DISCUSSION AND CONCLUSION	96

LIST OF TABLES

Table		Page
3.1	Supporting of stable hybridoma single-cell growth by BW conditioned medium	47
3.2	Supporting of hybridoma single-cell growth by various concentrations of BW conditioned medium	51
3.3	Supporting of newly formed hybridoma single cell growth by various concentrations of BW conditioned medium	52
3.4	Supporting of hybridoma single-cell growth by PMA-induced conditioned medium	58
3.5	Comparison of using PMA-induced conditioned medium and BM-Condimed H1 in generation of hybridomas producing anti-Ag85 and Hb E monoclonal antibodies	62
3.6	Comparison of Standard fusion method and pre-B cell isolation fusion strategy in generation of hybridomas produced anti- Hb Bart's monoclonal antibody	69
3.7	Using of pre-B cell isolation strategy in generation of hybridomas produce anti- LDL, HDL, and TFF3 monoclonal antibodies	70
3.8	Hybridomas generated from total spleen cells, Ag85B-BCCP specific B cells and negative cells: Experiment 1	75
3.9	Hybridomas generated from total spleen cells, Ag85B-BCCP specific B cells and negative cells: Experiment 2	76

3.10	Antibody isotypes produced by the hybridomas generated from total spleen cells	82
3.11	Hybridomas generated from IgM ⁺ cells, IgG ⁺ cells and IgM ⁻ and IgG ⁻ cells	83
3.12	Antibody isotypes produced by the hybridomas generated from IgG ⁺ cells, IgM ⁺ cells and IgM ⁻ and IgG ⁻ cells	84
3.13	Hybridomas generated from <i>in vitro</i> immunization	95

LIST OF FIGURES

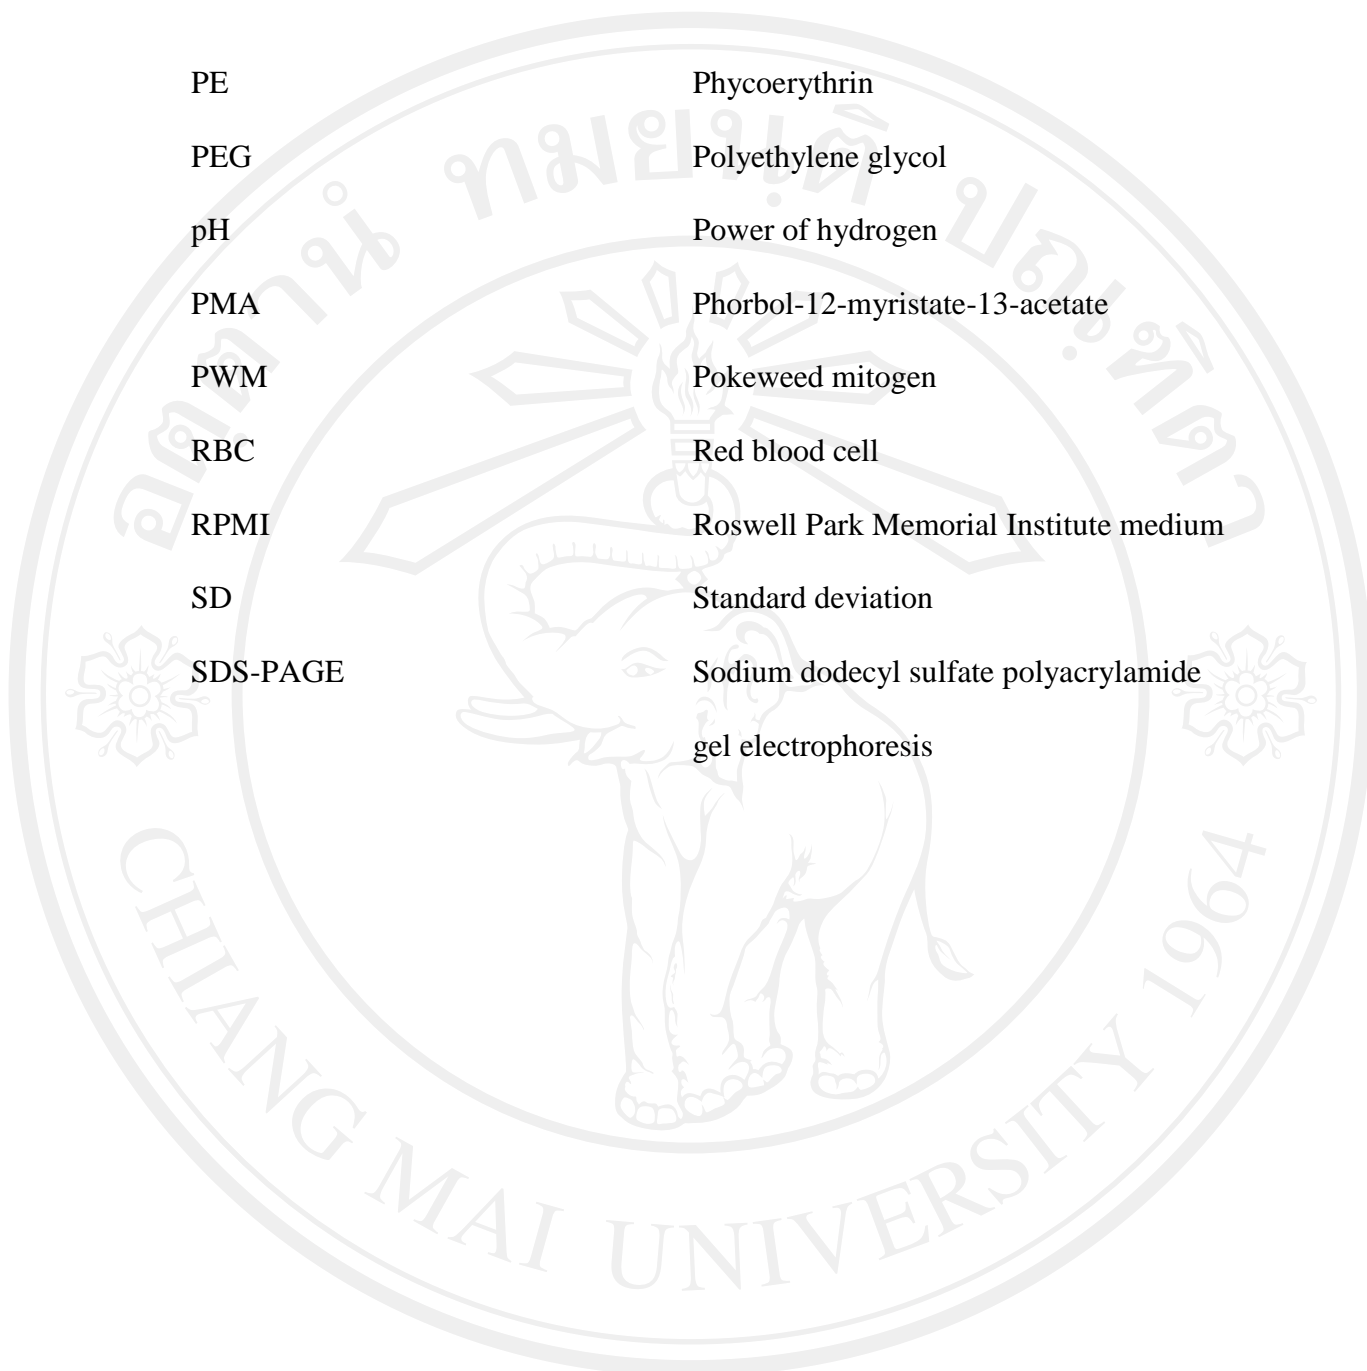

Figure	Page
1.1 The cancer B cell (myeloma) and an antibody-producing cell (B cell) are fused by polyethylene glycol (PEG) to result in an immortal antibody-producing hybridoma	9
1.2 Metabolic pathways relevant to hybrid selection in medium containing hypoxanthine, aminopterin and thymidine (HAT medium)	13
1.3 Pathway of nucleotide synthesis in antifolate drug selection	14
1.4 Drug selections for viable hybridomas	15
1.5 The generation of monoclonal antibodies by hybridoma technique.	20
2.1 Size of single hybridoma clone	34
3.1 Activity of monoclonal antibody produced by hybridomas supplemented with BW conditioned medium and BM-Conditioned H1	53
3.2 Comparison of BW conditioned medium and BM-Conditioned H1 in the generation of hybridomas from mice immunized with Hb A ₂ , platelets, CD99 and sugarcane crude leaf extract	54
3.3 Antibody responses in BALB/c mice after immunizations with Ag85B-BCCP and Hb E	59

3.4	Proteins analysis of PMA-induced conditioned medium, BM- Condimed H1 and 10%FBS-IMDM medium using 10% SDS- PAGE	64
3.5	Antibody responses of a BALB/c mouse after immunizations with hemoglobin Bart's	66
3.6	Antibody responses in BALB/c mice after immunizations with Ag85B-BCCP	72
3.7	Antibody responses in BALB/c mice after immunizations with Hb F	81
3.8	Antibody responses of spleen cells by <i>in vitro</i> immunizations with Ag85B-BCCP	86
3.9	Antibody responses in culture supernatant after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 1)	88
3.10	Specific antibody expression on spleen cells after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 1)	89
3.11	Antibody expression on spleen cells after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 1)	90
3.12	Antibody responses in culture supernatant after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 2)	91
3.13	Specific antibody expression on spleen cells after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 2)	92
3.14	Antibody expression on spleen cells after <i>in vitro</i> immunizations with Ag85B-BCCP (experiment 2)	93

ABBREVIATIONS

%	Percentage
α	Alpha
β	Beta
$^{\circ}\text{C}$	Degree Celsius
μg	Microgram
μl	Microlitre
μM	Micromolar
APS	Ammonium persulfate
BSA	Bovine serum albumin
CD	Cluster of differentiation
DNA	Deoxyribonucleic acid
EDTA	Ethylenediamine tetraacetic acid
ELISA	Enzyme-linked immunosorbent assay
FBS	Fetal bovine serum
FITC	Fluorescein isothiocyanate
g	Gram
h	Hour
HAT	Hypoxanthine aminopterin and thymidine
Hb	Hemoglobin
HGPRT	Hypoxanthine guanine phosphoribosyltransferase

HRP	Horseradish peroxidase
Ig	Immunoglobulin
IgA	Immunoglobulin A
IgE	Immunoglobulin E
IgD	Immunoglobulin D
IgG	Immunoglobulin G
IgM	Immunoglobulin M
Igs	Immunoglobulins
IL	Interleukin
IMDM	Iscove's modified Dulbecco's medium
kDa	Kilodalton
L	Liter
M	Molarity
mAb	Monoclonal antibody
MDP	N-acetylmuramyl-l-alanyl-D-isoglutamine (muramyl dipeptide)
mg	Milligram
ml	Milliliter
NaCl	Sodium chloride
NaHCO ₃	Sodium bicarbonate
ng	Nanogram
OD	Optical density
PBS	Phosphate buffered saline

PE	Phycoerythrin
PEG	Polyethylene glycol
pH	Power of hydrogen
PMA	Phorbol-12-myristate-13-acetate
PWM	Pokeweed mitogen
RBC	Red blood cell
RPMI	Roswell Park Memorial Institute medium
SD	Standard deviation
SDS-PAGE	Sodium dodecyl sulfate polyacrylamide gel electrophoresis
