Chapter 1 Introduction	
1. Background	1
2. Aim and Objectives of the Study	4
2.1 Aim	4
2.2 Objectives	4
3. Conceptual Framework	5
Chapter 2 Literature review	
Introduction	8
2.1 Oral health status in Thailand	8
2.2 Oral Health Care System for Schoolchildren	13
2.3 Universal patterns of dental caries	16
2.4 Oral Health Related Quality of Life and incorporating sociodental approach into normative needs	18
2.4.1 Concept	18
2.4.2 Oral Health Related Quality of Life Measurements	18
2.5 Thailand Dental Human Resources	20
2.5.1 Dentist	20

TABLE OF CONTENTS (continued)

		Page
	2.5.1.1 Dental specialist	21
	2.5.1.2 The production of dentists	21
	2.5.1.3 Dentist distribution in the health care system	22
	2.5.1.4 The production of new dentists	25
	2.5.1.5 Gender balance of dentists	27
	2.5.2 Dental Nurse	29
	2.5.2.1 The task of the dental nurse	29
	2.5.2.2 Number of dental nurses	30
	2.5.3 Dental assistant	33
	2.5.4 Dental technician	33
	2.6 Factors Influencing Dental Human Resources Needs	34
	2.7 Methods for Calculating Dental Human Resources Needs	39
	2.8 A Skill Mix Approach	47
Chapter 3	Research Designs, Scope and Methods	
	3.1 Epidemiology of Dental Disease in Schoolchildren	56
	3.1.1 Subjects and study sites	56
	3.1.2 Oral Examination	57
	3.2 Need Assessment of Schoolchildren	58
	3.2.1 Normative Need	58
	3.2.2 The Sociodental approach	58
	3.2.3 Impact-related Needs (IRN)	58
	3.2.4 Propensity-Related Needs (PRN)	59

TABLE OF CONTENTS (continued)

	Page
3.3 Assessment of time dentist use for treatment	60
3.3.1 Assessment of time for Dental Treatment of dentists.	60
3.3.2 Assessment of time for Dental Treatment of dental nurses.	60
3.3.3 Sample size estimation	61
3.4 Calculation of Manpower Need.	61
3.4.1 Model of Calculation based on different approaches	61
3.4.2 Scenario of dental caries prevalence.	62
3.4.3 Algorithm for the calculation	64
3.4.3.1 Primary teeth of subjects aged 6-11 years diagnosed as dental caries	64
3.4.3.2 Primary teeth of subjects age 6-11 without dental caries.	65
3.4.3.3 Permanent teeth of subjects aged 6-11 diagnosed as dental caries	67
3.4.3.4 Permanent teeth of subjects aged 6-11 without dental caries	67
3.4.3.5 Permanent teeth of subjects aged 12 and over diagnosed as dental caries	68
3.4.3.6 Permanent teeth of subjects aged 12 and over without dental caries	69
3.4.3.7 Periodontal disease in subjects aged 12 or over	70
3.4.3.8 Dental Trauma	71

TABLE OF CONTENTS (continued)

Page

3.5 Compare manpower need among different models and scenarios 72

3.5.1 Under different models of health need approach and disease prevalence scenarios 72

3.5.2 Under condition of delegating some workload to dental nurses 72

Chapter 4 Results

4.1 Normative need assessment and a sociodental approach using of Thai primary schoolchildren 73

4.1.1 Subjects 73

4.1.2 Oral Health Status of Primary Schoolchildren 75

4.1.3 Treatment Need 84

4.1.4 Oral health related quality of life 87

4.2 Characteristic of dental manpower in Thailand 94

4.3 Time used in providing treatment of dentists and dental nurses 97

4.4 Calculation of dental manpower 107

4.4.1 Three models for estimating dental manpower 107

4.4.2 The three scenarios of Model 2 108

4.4.2.1 Scenarios for primary tooth dental caries in 6-year-old schoolchildren 110

4.4.2.2 Scenario for permanent tooth dental caries in 12-year-old schoolchildren 111

TABLE OF CONTENTS (continued)

Page

4.4.2.3 Scenarios for periodontal status in 12-year-old schoolchildren 112

4.4.3 Annual caries increment estimated in Model 3 113

4.5 Breakdown Diagram 113

4.5.1 Primary teeth of 6-year-old schoolchildren diagnosed with dental caries 114

4.5.2 Primary teeth of 6-year-old schoolchildren without dental caries. 115

4.5.3 Permanent teeth of 6-year-old schoolchildren diagnosed with dental caries 116

4.5.4 Permanent teeth of 6-year-old schoolchildren without dental caries 117

4.5.5 Permanent teeth of 12-year-old schoolchildren diagnosed with dental caries 119

4.5.6 Permanent teeth of 12-year-old schoolchildren without dental caries 120

4.5.7 Periodontal disease of 12-year-old schoolchildren 121

4.5.8 Teeth with dental trauma 122

4.6 Manpower estimation 123

4.6.1 Model 1: Entire normative need 123

4.6.2 Model 2: Entire normative need incorporated with sociodental approach 127

TABLE OF CONTENTS (continued)

Page

4.6.3 Model 3: Annual incremental normative need incorporated with sociodental approach 132

4.7 Summary of Dental Manpower Need to Take care of Schoolchildren 137

Chapter 5 Discussion

5.1 Concept 154

5.1.1 Need assessment as a basis for manpower calculation 154

5.1.2 Concept of using entire normative need and annual incremental normative need in calculating dental manpower 156

5.2 Issue considering on dental manpower estimation 158

5.2.1 Epidemiology of oral health of Thai Schoolchildren 158

5.2.2 Application of universal pattern of dental caries in manpower estimation model 161

5.2.3 Incremental normative need in manpower estimation model 162

5.2.4 Sex of Dentists and its effect on time spent on dental tasks 164

5.3 Methods of Manpower Requirement for Dental Health 166

5.3.1 Manpower estimation models 166

5.3.2 Estimation of manpower using different models 167

TABLE OF CONTENTS (continued)

	Page
5.3.3 Workload on sealant, preventive care, and oral health promotion	172
5.3.4 Using a skill mix concept in the model	175
5.4 Implication for policy	175
5.5 Limitations of the Study	177
5.5.1 Sample representativeness	177
5.5.2 Response rate of the questionnaire and self –reported in time spending for dental tasks	177
5.6 Summary	178
Chapter 6 Conclusions	
6.1 Summary	179
6.1.1 Objective	179
6.2 Conclusions	182
6.3 Implication and Recommendations	182
References	184
Appendix	196
Curriculum vitae	242

LIST OF TABLES

Table		Page
1	Oral health status of Thai population from the 2nd – 6th National Surveys	9
2	DMFT index of 12 year-old children from the 2nd – 6th Thailand National Oral Health Surveys.	10
3	Oral health status of 12-year-old children from 2005-2008	13
4	Dentist per population by region in Thailand 2009	23
5	Distribution of dentist in Thailand in 2009 by organization	24
6	The dentist production trajectory of Thailand 1999-2014	26
7	Number of dental active and inactive dental nurses from 1969 to 2006	31
8	The 2-year and new 4-year curriculum for dental nurses	32
9	Buchan's summarized of determinants, requirements, and possible interventions related to skill mix	49
10	Main approaches to determining skill mix (Buchan 1999)	51
11	Sample size needed for epidemiology study of dental disease in schoolchildren age 6 and 12	57
12	Sample size estimation for assessing dentist and dental nurse time spending on dental treatment	61
13	Scenarios of mean dmft and DMFT for different region for manpower Calculation	64
14	Number and percentage of subjects in the study distributed by gender	74
15	Numbers and percentage of subjects in the study distribute by age	75
16	Mean number of primary teeth, permanent teeth, dmft, and DMFT of all subjects	76

LIST OF TABLES (continued)

Table		Page
17	Mean number of primary teeth, permanent teeth, dmft, and DMFT of subjects in Lampang province	77
18	Mean number of primary teeth, permanent teeth, dmft, and DMFT of subjects in Phuket province	78
19	Mean number of primary teeth, permanent teeth, dmft, and DMFT of subjects in Bangkok metropolitan	79
20	Mean number of primary teeth, permanent teeth, dmft, and DMFT of subjects in Udonthani province	80
21	Mean number of primary teeth, permanent teeth, dmft, and DMFT of subjects in Cholburi province	81
22	Number of sextant with various CPI in 12-year-old subjects	82
23	Number and percentage of 12-year-old subjects distributed by the maximum CPI score	83
24	Number and percentage of subjects with trauma teeth	84
25	Number and percentage of subjects and treatment needs in primary school children grouped by province	85
26	Mean number of teeth that needed dental treatment per subject in 6- and 12-year-old subjects	86
27	Number and percentage of subjects who attended the child-OIDP index assessment distributed by gender	88
28	Self-reported severity and frequency of oral impacts in the 12-year-old children.	89

LIST OF TABLES (continued)

Table		Page
29	Prevalence, performance score and intensity of oral impacts reported by 12-year-old participants	91
30	Numbers of daily life activities that are affected from subjects' own oral health	93
31	Number and percentage of 12-year-old schoolchildren who report their own oral hygiene promoting behaviour	94
32	Number of dentists in Thailand distributed by organization	95
33	Dentist to population ratio of Thailand in the year 2010	96
34	Age and gender proportion of dentists in Thailand	96
35	Demographic data of dentists and dental nurses who response the questionnaire	98
36	Average time per patient used by dentist for particular treatment	99
37	Average time per patient used by dental nurses for particular treatment	100
38	Time absent from work reported by all dentist.	101
39	Time absent from work reported by male dentists	102
40	Time absent from work reported by female dentists	103
41	Time in hours per day used for particular purposes by all dentists	104
42	Time per day used for particular purposes by male dentists	104
43	Time per day used for particular purposes by female dentist	105
44	Time absent from work reported by dental nurses.	106
45	Time per day used for particular purposes by dental nurses	107
46	Mean dmft of primary teeth in 6-year-old group by region from National Oral Health Survey	108

LIST OF TABLES (continued)

Table		Page
47	Mean DMFT of permanent teeth in 12-year-old group by region from National Oral Health Survey	109
48	Mean sextants of various periodontal status of 12 year old group from National Oral Health Survey	109
49	Scenario for primary tooth caries prevalence in 6-year-old schoolchildren in the year 2030	110
50	Scenarios for permanent tooth caries prevalence in 12-year-old schoolchildren in the year 2030	112
51	Scenarios for periodontal status in 12-year-old schoolchildren in the year 2030	113
52	Number of dentists needed to treat 6-10-year-old schoolchildren, estimated using Model 1	124
53	Number of dentists needed to treat 11-12-year-old schoolchildren, estimated by Model 1	125
54	Number of dental nurses needed to treat 6-10-year-old schoolchildren, estimated by Model 1	126
55	Number of dental nurses needed to treat 11-12-year-old schoolchildren, estimated by Model 1	127
56	Number of dentists needed to treat 6-10-year-old schoolchildren, estimated by Model 2	128
57	Number of dentists needed to treat 11-12-year-old schoolchildren, estimated by Model 2	129

LIST OF TABLES (continued)

Table		Page
58	Number of dental nurses needed to treat 6-10-year-old schoolchildren, estimated by Model 2	130
59	Number of dental nurses needed to treat 11-12-year-old schoolchildren, estimated by Model 2	131
60	Number of dentists needed to treat 6-10 year old schoolchildren, estimated by Model 3	133
61	Number of dentists needed to treat 11-12 year old schoolchildren group, estimated by Model 3	134
62	Number of dental nurses needed to treat 6-10-year-old schoolchildren, estimated by Model 3	135
63	Number of dental nurses needed to treat 11-12-year-old schoolchildren, estimated by Model 3	136
64a	Estimated numbers of dentists needed for treatment of caries and periodontal disease in children in the Thai school system in the year 2030, according to scenarios (including sealant workload)	138
64b	Estimated numbers of dentists needed for treatment of caries and periodontal disease in children in the Thai school system in the year 2030, according to scenarios (including sealant workload)	139
65a	Estimated numbers of dental nurses needed for treatment of caries and periodontal disease in children in the Thai school system in the year 2030, according to scenarios (not including sealant workload)	141
